

PIF paid \$210 a share for EA. Could a buyout fund?

An LBO of Electronic Arts rebuilt from the 10-K and the \$18bn debt package: sources and uses, six debt tranches, a five-year plan with cost savings, sponsor returns and the most a fund could pay at a 20% IRR.

↑ ENTRY PRICE PER SHARE · OUTLINED: \$210 AT THE BASE 16× EXIT

CONCLUSION

EA was not a classic LBO. At 19.4× EBITDA and 6.8× leverage, a fund with a 20% hurdle could pay \$122–197 a share. The \$210 price fits a long-term owner with a lower cost of capital, and PIF funds most of the equity.
